

Sephora Digital Transformation: Roadmap + RACI

Team: Violetta Alekseeva - Roadmap Sequencer | Nikita Siniayev - Governance Designer | Vagif Mammadov - Dashboard Designer | Kirill Ishchenko - Site Editor

Transformation Goal: Create a personalized, data-driven omnichannel beauty experience

1. Transformation Roadmap

CRAWL Foundations Months 0-9	WALK Experiences Months 6-18	RUN Intelligence Months 15-30+
1. Customer Data Foundation Build reliable customer and loyalty data. <i>Dependency: Foundation for later customer-data initiatives.</i> 2. Unified Customer Profiles Connect customer information across digital and in-store touchpoints. <i>Dependency: Depends on Customer Data Foundation.</i> 3. Digital Innovation Capability Build the capability to test and scale new digital experiences. <i>Dependency: Supports the Walk and Run initiatives.</i>	4. Omnichannel Customer Experience Connect stores, mobile, web, loyalty, and services. <i>Dependency: Depends on Unified Customer Profiles + Digital Innovation Capability.</i> 5. Color iQ Personalization Use technology-assisted matching to improve product discovery. <i>Dependency: Builds on customer data and digital infrastructure.</i>	6. Virtual Artist / AR Try-On Scale virtual product experimentation and connect discovery to purchase. <i>Dependency: Builds on mature digital commerce + personalization.</i> 7. AI-Powered Personalized Commerce Use AI for more intelligent product discovery and recommendations. <i>Dependency: Depends on integrated data + mature digital experiences.</i>

Main dependency sequence: Customer Data Foundation -> Unified Customer Profiles -> Omnichannel Customer Experience -> Color iQ Personalization -> Virtual Artist / AR Try-On -> AI-Powered Personalized Commerce

Sequencing rationale: We begin with customer data, connected profiles, and digital innovation capability because these create the foundation for later customer-facing technologies. The Walk phase uses those capabilities to strengthen omnichannel experience and personalization, while the Run phase scales more advanced AR and AI experiences.

Note: This roadmap represents our proposed sequencing of Sephora's digital initiatives based on dependencies rather than the historical order in which they were launched.

2. Governance RACI

R = Responsible | A = Accountable | C = Consulted | I = Informed

Governance Decision	Chief Digital Officer	CIO	Chief Marketing Officer	Data & AI Lead	Legal / Privacy	Business / Store Operations	Accountable Rationale
Digital transformation budget allocation	A	C	C	I	I	C	The Chief Digital Officer is accountable because this role owns overall digital transformation priorities and investment tradeoffs.
Technology & architecture standards	C	A/R	I	R	C	I	The CIO is accountable because architecture standards affect enterprise technology, integration, security, and scalability.
Customer data governance & privacy	C	C	I	R	A	I	Legal / Privacy is accountable because customer data use must meet privacy, consent, and regulatory requirements.
Digital initiative prioritization	A	C	R	C	I	C	The Chief Digital Officer is accountable because this decision determines which transformation initiatives receive priority.
Technology vendor & partnership decisions	A	R	C	C	C	I	The Chief Digital Officer is accountable because vendor choices must support the overall transformation strategy and business priorities.
AI personalization & customer experience governance	C	C	A	R	C	C	The Chief Marketing Officer is accountable because personalization directly affects the customer experience, brand, and marketing strategy.

Governance rationale: This RACI gives each recurring governance decision one clear accountable owner while still involving the technology, data, privacy, marketing, and store teams affected by the decision. This is especially important for Sephora's personalization initiatives because customer experience, data use, technology, and privacy need to be managed together.
